Ocotillo
Fouquieria splendens

Hedgehog
Echinocereus engelmannii

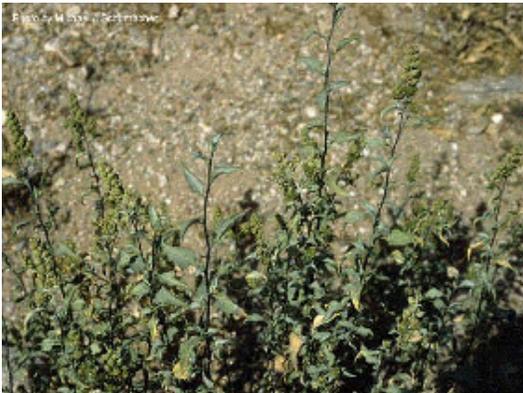

Pincushion
Mammillaria grahamii

Tumamoc Citizen-Scientists Species Identification Sheet

Triangle Leaf Bursage *Ambrosia deltoidea*

Triangle-leaf bursage is a small, round shrub about 1 1/2 feet tall and 2 feet wide. It has many slender and brittle branches that grow from the base to create a dome-like crown.

Creosote Bush *Larrea tridentate*

This medium-to-large evergreen shrub has numerous flexible stems projecting at an angle from its base. It is usually less than 4 feet high, but can grow to 12-foot heights with abundant water. Its small (1/4 to 1/2 inches), pointed, yellow-green leaves have adapted to conserve water and dissipate heat.

Medium to large sized shrubs. Often several seemingly distinct shrubs will be growing together in a ring 6 to 20 m in diameter. This represents a clone of an original plant that may have been growing continuously for thousands of years.

Fariyduster

Calliandra eriophylla

Image from <http://www.arizonensis.org>

Shrub rarely over 1 m tall. Leafless during periods of drought. Very long, conspicuous stamens are hot pink. Common on rocky slopes and along wash banks. No thorns.
